## Ticket Object

### **Payment Object**

#### **Scenarios**

#### Login

In this scenario, this is the first screen that the user will be presented with upon launching the application. If the user is registered, they will be able to <u>login</u> as a <u>registered user</u> by providing their email and password, or they have the option to proceed as a <u>regular user</u>. Finally there will be an option for them to click to <u>sign up</u> to become a <u>registered user</u>.

Assuming they are a <u>registered user</u>, after entering their email and password, the <u>system</u> will then <u>validate</u> the credentials entered with the database and if they are valid, allow the user to <u>login</u> into the system. If the <u>registered user</u> has made an error when entering either the username or password, they will be shown an error message and prompted to try entering their credentials again

#### Register User

In this scenario, a <u>user</u> wishes to <u>register</u>. After selecting this option, the system will prompt them to enter their <u>user-information</u> such as name, email, address, and card-information as means of payment. Then it will trigger the Pay Annual Fee use case.

#### **Browse Theater**

In this scenario, the <u>system</u> will <u>query</u> the database for all <u>theaters</u> and present this list to the user. From here, the <u>user</u> will then select the desired <u>theater</u> and then this will trigger the Browse Movies use case.

#### **Browse Movies**

In this scenario, a <u>user</u> has already selected the <u>theater</u>, and the <u>system</u> will now <u>query</u> the database to gather the list of <u>movies</u> that are currently playing. This will then be presented to the user where they will be able to view the relevant information about the <u>movie</u> such as title. The user will then be able to select the desired <u>movie</u> and then this will trigger the View Showtimes use case.

#### **View Showtimes**

This scenario should be available to <u>users</u> after selecting a <u>Movie</u> from the Browse Movies scenario. Selecting the <u>movie</u> should trigger a <u>query</u> from the database and retrieve all <u>showtimes</u> for the specified <u>movie</u> on the specified <u>date</u>. <u>Showtimes</u> will be displayed as a list to the <u>user</u>. Once the user selects a <u>showtime</u>, this should trigger Manage Seats use case.

#### Manage Seats

In this scenario, a <u>user</u> has already selected a <u>theater</u>, <u>movie</u>, and <u>showtime</u> and is currently looking to <u>manage</u> the <u>seats</u> for this <u>reservation</u>. At this point, the system will <u>graphically display</u> the <u>theater seats</u> for the given <u>auditorium</u> and show which <u>seats</u> are available and which are already reserved for this <u>showtime</u>. After the <u>user</u> has selected their desired <u>seats</u>, they will be able to select the confirmation that will initiate the next step in the checkout process, Make Payment.

#### **Purchase Ticket**

In this scenario, a <u>user</u> has selected their desired <u>movie</u>, <u>seats</u>, <u>and showtime</u> and has decided to proceed to <u>checkout</u>. At this point, the system will present the user with the <u>reservation</u> details and the make <u>payment</u> option. Assuming the user is satisfied with their selection, they can select the make payment option to continue the <u>checkout</u> process.

#### Make Payment

This scenario is initiated after the Purchase Ticket scenario. This is the step where the system interacts with the bank to <u>send</u> the <u>payment</u> request and <u>receive confirmation</u> from the bank. In this scenario, a <u>user</u> has selected their <u>theater</u>, <u>movie</u>, <u>showtime</u>, <u>and seat(s)</u> and then proceeds to the checkout interface to <u>make payment</u> to complete their <u>reservation</u>. The user is prompted to enter their method of <u>payment</u> and submits this to the system, the system will then confirm the completion of the process. After successfully making the <u>payment</u>, the <u>user</u> is sent the <u>ticket</u> and the <u>receipt</u> to their email. The <u>reservation</u> is then saved in the Movie Theatre Database.

#### **Cancel Ticket**

In this scenario, a <u>user</u> has already purchased a <u>ticket</u> and wishes to <u>cancel</u> their <u>reservation</u>, upon selecting the cancel <u>ticket</u> option, a <u>user</u> will be prompted for their <u>reservation</u> number. The system <u>verifies the ticket purchase</u>, and whether the <u>user</u> is a <u>registered user</u> or not, and if at the time of requesting the <u>cancellation</u> it is more than 72 hours from the <u>showtime</u>. If the request is within 72 hours of the <u>showtime</u>, the system will not allow the user to cancel their ticket. Otherwise, if the <u>user</u> is a <u>regular user</u>, they are required to pay a 15% admin fee, and they will receive a <u>voucher</u> for a discount on a future <u>ticket</u> purchase with a 1 year expiration date. If the user is a <u>registered user</u>, they will receive a full <u>refund</u> of their ticket purchase and are not required to pay the 15% admin fee.

Once the ticket is cancelled, the selected <u>seats</u> should be released and become available for other users to <u>reserve</u>. This change should be reflected in the Manage Seats use case.

#### Pay Annual Fee

In this scenario, the <u>registered user</u> has successfully created their account, and is now required to sign up for the annual subscription. The user will be required to pay \$20 per year to maintain their subscription. At this point the system will prompt the <u>user</u> if they agree to the terms of the subscription, and if they do, it will submit the <u>payment</u> and confirm the completion of the process. Note: at this point, user has already entered their banking information as part of the registration use case. Upon successfully completing, the <u>user</u> will now become a <u>Registered User</u>.

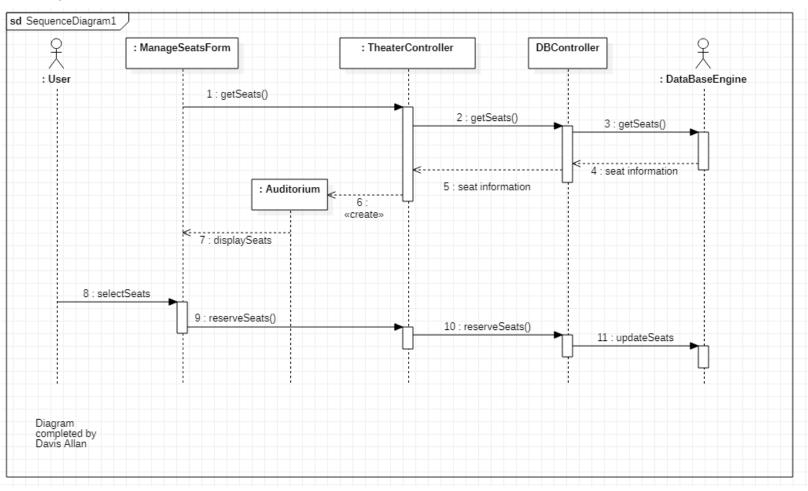

### List of good-candidate objects

Candidate Object	Operations on candidate object
System	Validate login Query database for theater list Query database for movie list Query database for showtime list Verify ticket purchase
Theater	Get/Display Theatre Get movie list
Auditorium	Get/Display Auditorium Get seats Graphically display seats
Movie	Get list of showtimes Reserve a seat(s)
Showtime	Display Showtime
Seat	Manage seat(s)
User	Register Cancel ticket Purchase ticket Checkout Make payment
Registered User	Login Purchase/cancel ticket Make payment
Ticket	Email ticket
Payment	Send payment Confirm payment
Voucher	Email voucher

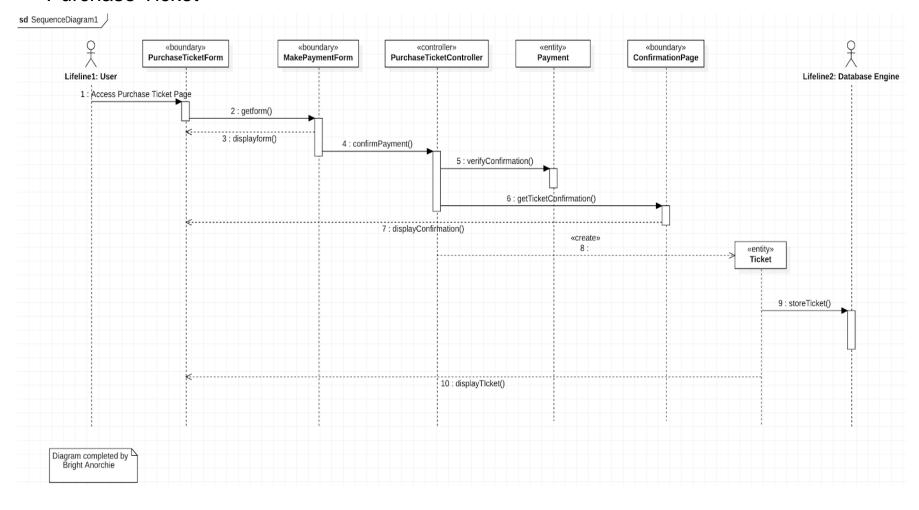

Cancellation Confirmation	Email confirmation
Purchase Confirmation	Email Purchase Confirmation
Refund	Email Refund
